

HE+ Pump with Copper for Non-Condensing Tankless Water Heaters

Now Recirculation is Easier, More Flexible and More Economical

FAST, SIMPLE INSTALLATION

Rinnai's new plug-in, modular pump works with any Rinnai HE+ Tankless Water Heater enabling either dedicated or cross-over recirculation.

- Requires only four field connections: cold inlet, hot outlet, and dedicated return line or cross-over line
- Kit contains all necessary components for installation
- Simple plug-in design for the tankless unit – no separate electrical connection is required

SAVE TIME AND MONEY

- Offers savings in materials and installation labor
- Less opportunity for installation errors
- Greater pump head pressure allows for longer recirculation length as compared to other off-the-shelf tankless pump kits
- Designed to provide aesthetically appealing installation

ENHANCED PERFORMANCE AND DURABILITY OF THE HE+ SERIES

Since 1964, more than 20 million Rinnai tankless units have demonstrated the reliability and longevity of our copper heat exchanger. Chosen for its conductivity and thermodynamics, copper delivers ideal performance in the HE+ Series Product Series. Now the Series offers a simpler solution to recirculation.

Ships with choice* of MC195-T Digital controller or Control-R™ Wi-Fi Module for recirculation control.

DEMAND RECIRCULATION KITS FOR HE+ SERIES DEDICATED AND CROSS-OVER MODES*

Part Number	Description
HEPumpKitMC	HE+ Pump Kit with MC-195T
HEPumpKitCR	HE+ Pump Kit with Control-R

*Part Number corresponds with specific controller.
